

Hannelie Viljoen

Hannelie Viljoen studied industrial engineering at the University of Pretoria and upon completion of studies in 2003 decided to specialise in the field of Supply Chain and Logistics. With 13 years' international experience and proven delivery across the full breath of Supply Chain Management including warehousing, logistics, procurement and Integrated Business Planning (advanced S&OP), the focus is on driving innovative thinking and an open-minded approach towards business results. Key achievements include implementation of advanced S&OP process across 11 SABMiller operations in Africa delivering R 20 million in costs savings whilst improving both finished goods availability and forecast accuracy - up to 5% improvement - in each operation. However, the biggest satisfaction at the end of the day is to see the individual team member's journey of personal growth through playing their part in delivering these improvement projects.
