

Matome Maepane

Matome Maepane holds a BTech in Industrial engineering from University of South Africa and is currently studying towards a Mechanical Engineering Diploma with UNISA.

He has participated in a variety of industries over the past 10 years, giving him the required insight and experience to ensure effective and holistic management of both projects and people. His involvement in different roles includes experience in production processes, people management and -discipline, procurement management, product design and -development, organizational change management, process optimization and innovation, value engineering as well as quality management.

People development is very important to him, because the people actually are the business.

During the course of his career he has learned to work under pressure with tight deadlines. In many instances he had to make use of cross functional teams and integrate a variety of engineering disciplines to execute product design and development. In the different Junior management positions (Process Engineer, Technical Buyer, Production Team leader, Industrial engineer, SAP BOM management) he occupied, he had to facilitate a broad array of responsibilities which gave him exposure to the holistic business management, including administrative, financial and technical responsibilities. He therefore appreciates and understands the intricacies of such a management role.

In regard to his extracurricular activities, he likes playing chess, and reading chess books. He appreciates the value of the insistence, ambition and team spirit. He has learnt the commitment is key.
