

WORKSHOPS

How to become an Eco-warrior through Simulation

CLEMENS DEMPERS

The circular economy, lifestyle impact on global warming and reducing one's carbon footprint are not only very topical issues, but also very important for the future of our civilization.

These are however complex, multi-disciplinary problems to be solved. This workshop will explore ways that Simulation can be applied to ecological sustainable projects and issues.

Introduction to Biomimicry

CLAIRE JANISCH

This workshop will introduce you to the basics of the Why, What and How of biomimicry and how to begin to apply Biomimicry Thinking tools and methodologies in your work.

Introduction to Value Engineering

KONRAD BINDEMAN AND PAUL J WHITEHOUSE

Imagine a future where your product, service, or project becomes ultra-competitive. Imagine a future where you are making big decisions about your business and life with confidence. Imagine a future where your internal expertise is enough. Welcome to the world of Value Engineering!

SAIIE31 is committed to ensuring a special conference experience! Our great conference software will be your beautiful venue. There will be an exciting quiz-night to discover new connections and reconnect with old friends. We are exploring the ability to host several mini-conference dinners near you - if you would like to be part of the planning in your city or town, please let us know. There will be the traditional outstanding international and local content with superb workshops. The SAIIE31 experience will be very different to any other conference - and it is our priority to ensure that it is a memorable, albeit unfamiliar, but unforgettable conference.
